**RENS** Metal Detectors are designed to save you money.

We have been manufacturing metal detectors for industrial applications for more than 70 years.

Whatever your needs are we have a detector to keep metal from damaging your equipment. There is no situation we can't adapt to or figure out. Let us help you save down time, save equipment and keep profits flowing.

**Tectronix / Metal Shark** was established in 1995 and brings the capacity to develop and produce highly sensitive industrial metal detectors for a wide array of industries to the Connexus umbrella.

Metal Shark is the industry leader in digital microprocessor technology. With their effort to continue to research and develop new and improved products we strive to be the benchmark for metal detection.

# METAL SHARK WHOLE LOG APERTURES

AVAILABLE IN SQUARE AND RECTANGULAR CONFIGURATIONS

## Exclusive Round Aperture

- Delivers balanced all around signal for optimum sensitivity
- Important with a variable diet of log configurations

## Rectangle Aperture

## Square Aperture

- Shortest Metal Free Zone (MFZ) in the Industry
- Stainless Steel housings provide Total Shielding against transient influences that cause false/nuisance tripping
- The most technologically advanced metal detector available . . . exclusive 4 channel DDS and DDP microprocessor provides continuous accuracy and stability
- System 'learns' the product and automatically compensates and adjusts for such things as different species, moisture, VFDs and pitch ensuring 95% less false/nuisance tripping
- Up to 6000 fpm scanning speed with 100% accuracy
- Dye mark and/or electronically signature exact location of metal

## A 40 / A 60 - RADAX WHOLE LOG SEARCH COIL

- Rectangle or Hexagon Aperture Coil built to match existing conveyor trough specifications
- RADAX internal coil configuration to maximize detection sensitivity

## A 50 - SQUARE HIGH POWERED SEARCH COIL

- Efficient and cost effective tramp metal detector
- Aperture size customizable to perfectly fit application - small logs, cants, boards, etc.

## A 30 - U SEARCH COIL

- Originally designed for scanning pulp logs for tramp metal
- Open top allows crane operation and material removal without potential damage to search coil

- Constructed with internal shielding and multi-layer fiberglass to withstand tough environments
- Analog technology provides simplified operation - set the parameters then walk away
- Analog detection circuitry is more forgiving when changing between materials or log species

## ST/VT VIBRATORY & BELT CONVEYOR METAL DETECTOR

- 3-sided protection configured to suit your conveyor
- Shortest Metal-Free Zone (MFZ) - 24" in the Industry
- Sensing for metal from 3 sides provides maximum protection
- Detector is molded as an integral part of the fiberglass section
- Stainless Steel housings provide Total shielding against transient influences that cause false/nuisance tripping
- Easy to install into conveyors with or without an existing system
- Superior performance vs. Flat Plate style detector
- Safeguards your downstream equipment from unexpected surges in burden depth
- ST model comes with 3/8" thick black anti-static UHMW wear liner
- Pulp safe options available

**METAL SHARK FLAT PLATE**

- Shortest Metal Free Zone (MFZ) in the industry  
**48"** for vibrating conveyors  
**30"** for belt conveyors
- Stainless Steel housings provide Total Shielding against transient influences that cause false/nuisances tripping
- Rugged design will withstand the harshest environments

**RENS FLAT PLATE**

- Fail-safe electronic design
- Controller Models available to provide 10 or 30 levels of sensitivity adjustment
- Two solid-state control relays
- Modular construction (plug-in electric modules)
- Wide temperature operating range (-15C to +55C ambient air temperature)
- Large meter readout
- Manual or automatic reset mode
- Search coils for belt or trough width ranging from 14" to 78"
- Power input option - 120/240V (50-60Hz AC 1 phase)
- Ferrous & non-ferrous metal detection
- Three year warranty

## P-4000 PORTABLE METAL DETECTOR

### P-4000 PORTABLE METAL DETECTOR

Rens Model P-4000 is a fully automated unit. The P-4000 runs 10 hours on a full charge. Regulated power prevents loss of sensitivity as battery charge is depleted.

#### Features

- Self Calibrating
- Durable
- Regulated Power
- Battery Gauge
- Protective Case
- Fully Adjustable

## COMBI

- Flat metal detector for textile and non-woven products
- Provides outstanding sensitivity, accuracy and precision
- Digital balance control levels temperature and humidity influences
- Auto calibration provides fast and easy setup
- Digital frequency and phase control avoid any drifts. Once the system is calibrated it will keep the setup forever. There is no need for recalibration
- Available with a high-speed option
- Custom designed into segments to suit specific needs
- Supplied with product guides to ensure uniform contact between product and sensing face
- Supplied with floor stands

## SPECIALTY APPLICATIONS

### GRAVITY FEED

#### Bulk Material Application

- Available in standard and compact design
- Easy to hand and install with supplied bracket
- SS housing provides total shielding against transient noise
- Supplied with auto reject chute
- High Pressure wash-down option available

### BIG PBA

#### Engineered Wood

- Provides outstanding sensitivity, accuracy and precision
- Power drive booster field
- Dimensions of coil designed for installation on most molding lines
- Application range spans both thin & thick production lines
- Runs on conveyor speeds ranging from 1 - 400ft/min

## FORMING & PRESS LINES

Cassel Metal Detectors are the number one choice for metal detection on all Siempelkamp and Dieffenbacher forming and press lines.

Connexus is now offering a competitive upgrade package to enable you the opportunity to get optimum performance for your forming and press line metal detectors.

### Advantages

- Enhanced graphic presentation on 5.4" colour display
- Easy set-up, troubleshooting and test modules
- Improved reporting capabilities
- Enhanced logging features for metal alarms and event reports
- Upgrade from a DSP system for increased sensitivity
- Most of the spare parts for the DSP system are now obsolete

## SHARKNET-2™ SOFTWARE

Our SharkNET-2™ Software (Shark-2A electronics accommodates a connection to a common point such as maintenance or planning office).

- The software enables mill personnel to record and analyze productivity/operating data and display the status of all detectors on line
- The data will be recorded automatically and displayed in report form
- Remote Control Access if the metal detector is installed in a lock down area

**The software also allows the service technician or mill personnel to perform diagnostics, when and if required.**

### Package includes:

- Shark2A Control Box update
- Shark Net Software
- Ethernet module
- Mounting Kit
